Edu-BioMed is an **Erasmus+ Capacity Building in Higher Education project** that aims to strengthen, improve and foster Education and Research in & on Mediterranean Biosphere Reserves.

As per UNESCO definition, “Biosphere Reserves are ‘learning places for sustainable development’. They are sites for testing interdisciplinary approaches to understanding and managing changes and interactions between social and ecological systems, including conflict prevention and management of biodiversity. They are places that provide local solutions to global challenges.”

Several tools for education and research in the field of inquiry have been produced throughout the lifetime of the project. This webinar is meant to present such instruments and further discuss the importance of the exchanges among Universities and Biosphere Reserves.
